Experience

○ 2022-

E-mentor Online Portal (MERN stack)

Project Leader

A portal that works as a bridge for the better communication between mentors and mentees. By using mern stack we are providing a robust platform where both mentor and mentee can connect in an all in one environment. Where you will have in build chat bot using api and a native video calling app. The system provides better data storing part where the mentor can easily observe or analyze mentees performance and their health condition

○ 2022-

Full Stack Web Development Training

Trainee

During my training i have been taught Html, Css,Javascript, node.js and MongoDB. As a assignment of the training we are making a video conferencing app. In this video calling app the user will have their own dashboard where they can observe all their history of video calls and also this app will provide you a better notes taking environment, in which you can store your notes in mongodb database.

○ 2022-

Pop chat"-real time chat application (MERN stack)

Full stack developer

The real time chat application will provide you a environment where you can login without your contact number or mail involvement because user will be given a system generated user id for login. Ans also it provides better backup for your chats. It means after exporting chat user can import there chats from mongodb database in a better json format by that the imported chat will easier to read for the all kind of users and it also includes the features where the imported chat folder will be password protected that can only accessible by the authorized user.
